

iBroker Mobile Trading Platform Now Connected to Popular CQG Trading Platforms

Smartphone App Developed by TradingMotion Allows CQG Users to Trade on the Go.

CHICAGO and MADRID, June 5, 2014 – Technology firm TradingMotion introduced its iBroker application with enhanced mobile trading capabilities now connected to Continuum and available for free download in the Apple and Android app stores. The application, developed by TradingMotion, combines a powerful mobile trading platform and impressive digital display with the easy-to-use functionality of popular mobile devices including the iPad, iPhone, and Android.

The iBroker app provides traders with the ability to access real-time market data on futures markets around the globe, and place orders through their existing CQG login credentials.

“We are excited for the opportunity to extend mobile CQG access to our customers,” said Ryan Moroney of CQG. “The iBroker app enables our traders to easily and efficiently check quotes and execute trades on their mobile devices while seamlessly syncing with desktop trading activity.”

“We are proud to be connecting to Continuum and sharing our iBroker app with CQG’s devoted customer base,” said Jon Berrojalbiz, founder of TradingMotion. “Our goal was to create an app that mirrors the professional grade tools and data seen on CQG users’ PC platforms on traders’ mobile devices, and we believe we delivered on that goal 110%.”

iBroker is available to customers of Straits Financial, Dorman Trading, AMP Trading, and Rosenthal Collins at this time; with more of the 80+ brokerage firms worldwide using CQG coming online through the rest of the year as customers request access. To gain access to mobile trading via your CQG user login, request iBroker from your futures broker today.
